Introduction to Business Process Management (BPM)

BPM improves workflows, efficiency, and services

Analyzes, automates, and optimizes business processes

Project focus: BPM at Saudi National Bank (SNB)

Exploring processes, challenges, and solutions in SNB

Importance of BPM for smooth banking services

Project Overview

- Project Title: Business Process Management at Saudi National Bank

- Focus Area: Loan Application Process Improvement

- Goal: Enhance efficiency, reduce errors, and improve customer satisfaction

Brief Overview of BPM

- A way to organize and improve work.
- Goal: faster, better, and happier customers.
- Analyze, design, and watch processes.
- Fewer mistakes, more results.

INTRODUCTION ABOUT THE ORGANIZATION

Saudi National Bank (SNB), the largest bank by assets in Saudi Arabia, was founded in 1953 as The National Commercial Bank (NCB). In 2021, it merged with Samba Financial Group, forming a diversified financial institution. SNB offers a wide range of services, including investment solutions, Islamic banking, and wealth management, and plays a key role in supporting Saudi Arabia's Vision 2030 goals.

Organization Process Architecture

Management processes				
Risk management	Operational management	Customer relationship management	Service quality management	Cyber Security

core processes						
Banking operations	Customer service	Loan processing	Compliance	Investment proccess	Retail banking	Corporate banking

Support processes					
Finance	Human resources	IT	Customer support	Investment proccess	Marketing

BPM
(BUSINESS PROCESS MANAGEMENT)

- Manages and optimizes business processes for efficiency and compliance.
- Supports key goals: product development, order fulfillment, and customer support.

BENEFITS OF BPM

- Achieves business objectives and improves customer satisfaction
- Enhances productivity and minimizes mistakes
- Supports digitalization and policy compliance
- Empowers employees and improves overall efficiency

Organizations Using BPM Successfully

IBM: Uses BPM through Cloud Pak for Business Automation

- Streamlines IT service management
- Optimizes operations through AI-driven automation
- Decreases inefficiencies for internal and external users

American Express: Implements BPM for financial services

- Improves fraud detection
- Automates customer support
- Ensures regulatory compliance while minimizing operational risks

HOW DOES BPM HELP IMPROVE THE COMPANY

- Process Automation
- Product Offerings
- Customer Support
- Loan & Card Approvals

Personal Loan Process at SNB

- Customer applies (branch, app, or website).
- Bank checks income, job, and credit score (SIMAH).
- System calculates loan and interest.
- Customer signs contract online.
- Bank sends money to customer’s account.
- Customer repays monthly from salary or account.

Process Control & Monitoring at SNB

- AI monitors for strange transactions.
- Payment reminders and late tracking.
- Reports on approvals, repayments, and feedback.
- Customer support reviews complaints and issues.

Existing Process & Workflow Report

Current Situation:

- 24-hour approval for most loans.
- 80% approval rate.
- 85% customer satisfaction.

Challenges:

- Some customers don’t understand loan terms.
- High demand slows processing in busy seasons.
- Some login issues with digital contracts.

Suggested Improvements:

- More AI to speed up approvals.
- Easier and clearer online application.
- Use data to find risky customers early.

PROCESS IDENTIFICATION

SNB aims to fully digitize the loan process via the mobile app, saving time and improving efficiency.

1. STAKEHOLDER ANALYSIS

Retail Banking Team: Aligns loan products with customer needs.

Digital Banking Team: Automates and improves application processes.

Risk and Compliance Teams: Ensure regulatory and policy compliance.

Operations Team: Handles loan approvals and fund transfers.

IT and Development Team: Maintains digital systems.

Customer Experience and Support Teams: Assists customers during the process.

Marketing and Communication Team: Educates customers on digital loans.

2. SWOT Analysis

Strengths:
Strong digital platform, tech-driven customer base, commitment to tech improvements.

Weaknesses:
Some manual approval steps, complex compliance checks.

Opportunities:
Use of AI, wider customer reach, personalized loan offers.

Threats: Regulatory delays, poor user experience risk, competition from other banks.

PROCESS DISCOVERY

Loan Request Submission: Customers apply via app or site.

Customer Verification: System checks identity and finances.

Compliance & Risk Assessment: Ensures legal and policy adherence.

Credit Approval: Team evaluates and approves/rejects application.

Debt Terms Agreement: Customer reviews and accepts terms.

Fund Payment: Loan amount transferred to customer’s account.

Follow-up: Bank checks post-loan experience.

THE PROCESS TO BE IMPROVED

Submission of Mortgage Request: Simplify the form by removing unnecessary steps.

Customer Verification and Qualification: Automate verification to speed up checks and eliminate manual work..

Compliance and Risk Assessment: Integrate compliance checks into the loan platform for faster, automated reviews.

Credit Approval System: Use automated tools for quicker approval decisions.

Fund Payment: Upgrade payout systems for instant loan transfers.

PROCESS ANALYSIS

- Process Flow Issues: Manual steps cause delays
- Timeframe Challenges: Longer processing for incomplete applications
- High Operational Costs: Manual document handling increases expenses
- Error Rates: Misunderstandings and data entry mistakes

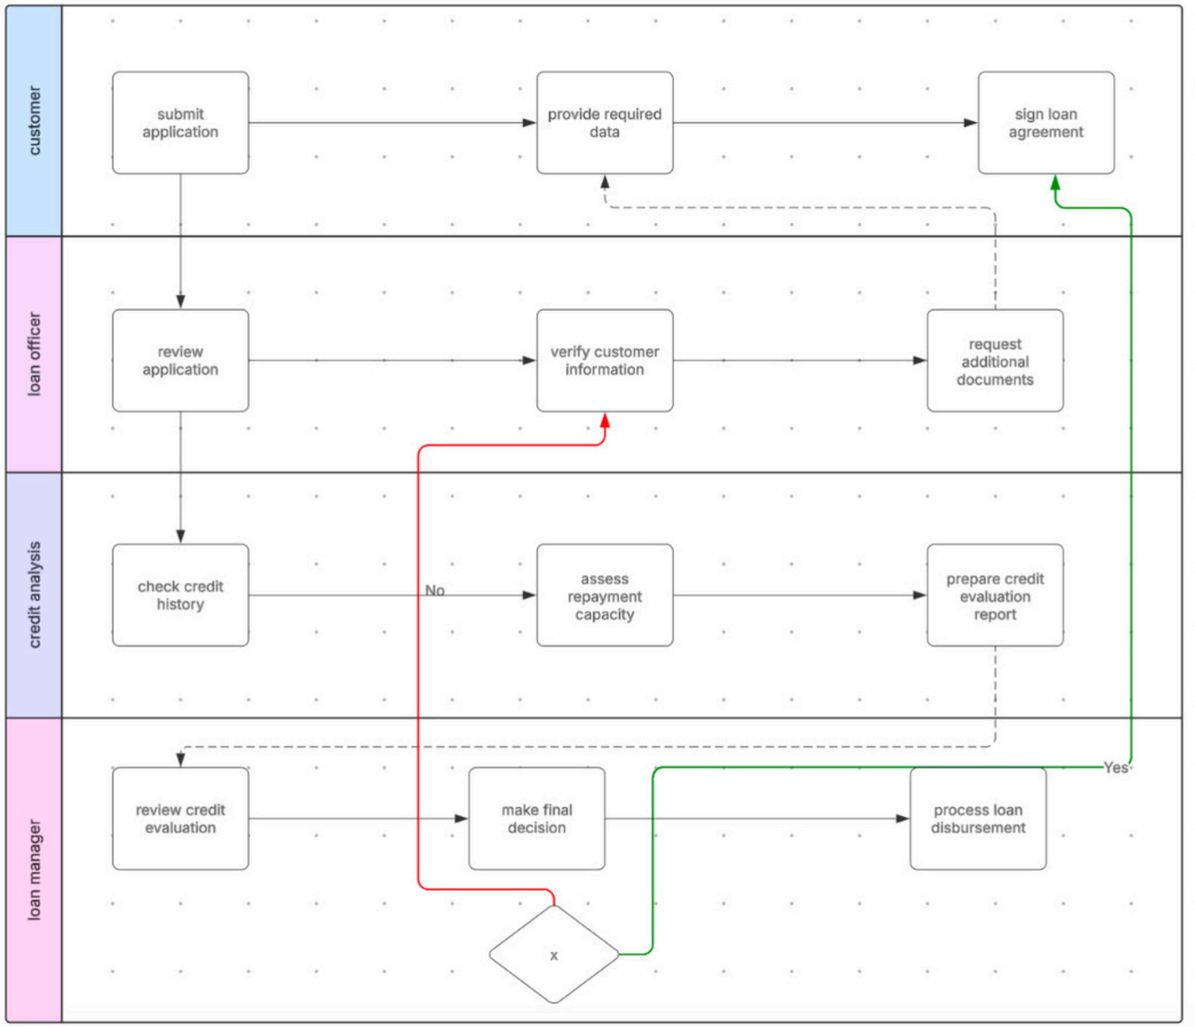

PROCESS REDESIGN

Automation of Loan Application: Instant identity and document verification using Nafath

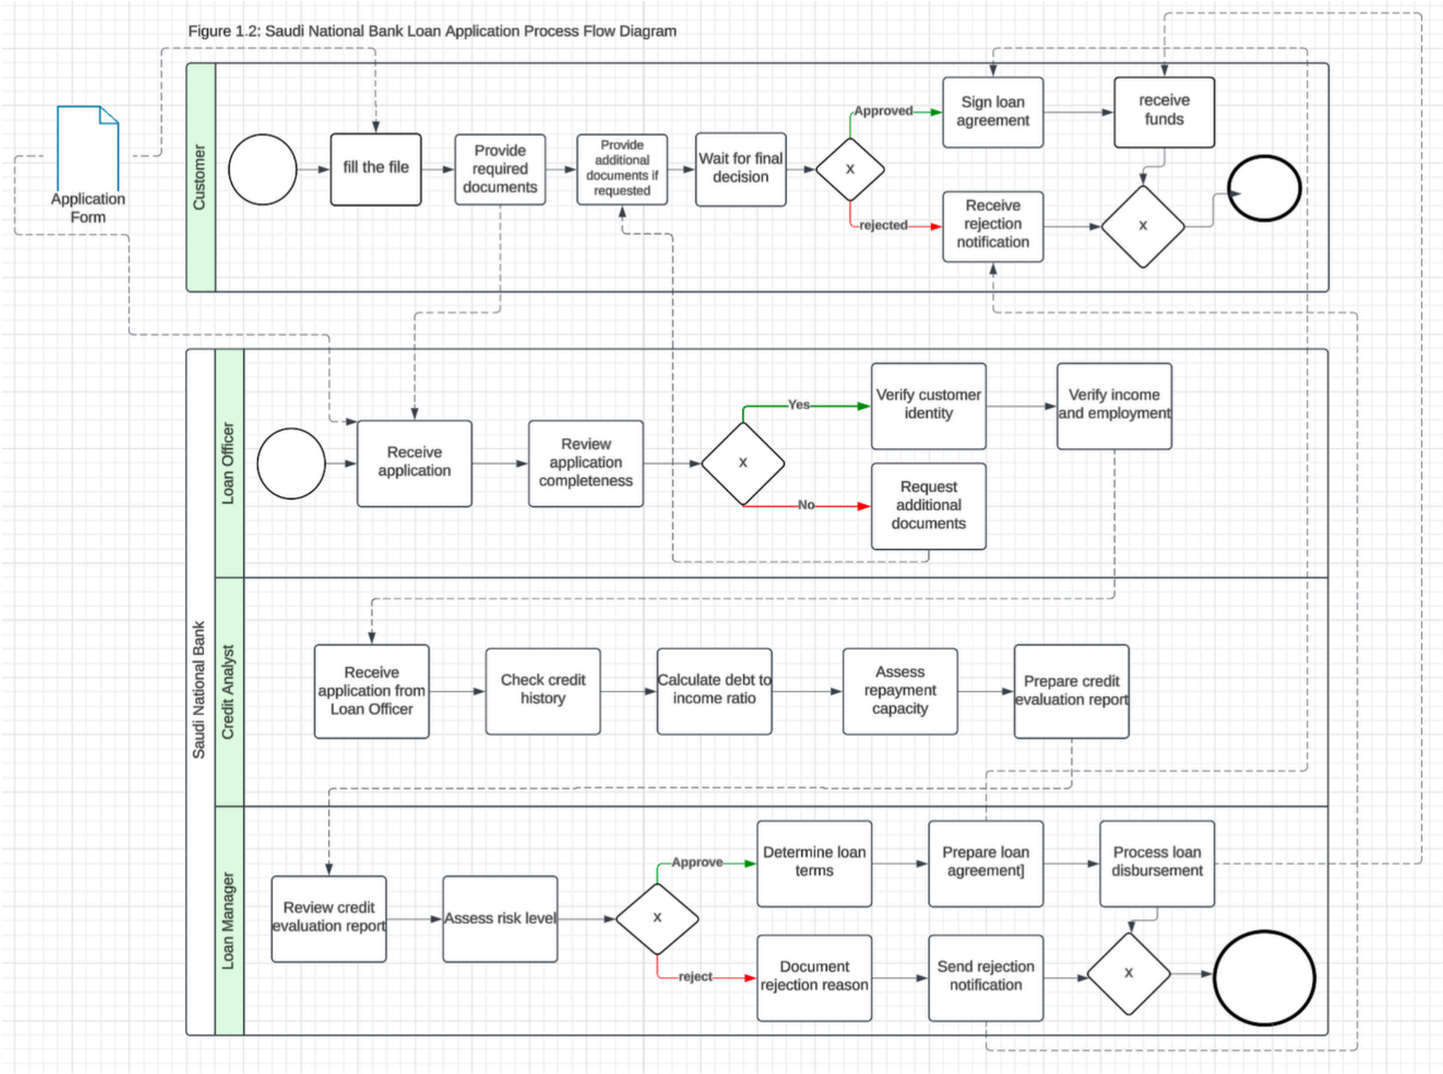

- Integrated Compliance Checks: Faster and more efficient loan approvals
- Digital Contract Signing: Agreements signed through the SNB app
- Quick Fund Disbursement: Immediate transfer of funds after approval
- Feedback Mechanism: Monitor satisfaction and improve based on customer feedback
